

MARCOS

Morales Rodrigo

Senior software developer
product analyst/owner
project & team leader
technical leader/consultant

a brief bio...

who am I?

My name is Marcos Morales Rodrigo. I am a senior software developer born in Spain in 1982. I speak Spanish (as it is my mother language), Portuguese (I used to live by the border between Spain and Portugal) and English (I have accredited advanced IELTS - C1/7.5). I have full rights to work freely anywhere in Australia as I am approved Australian Citizen (just waiting for my ceremony and passport).

I can describe myself as a highly polivalent IT professional, serious with my work, reliable, motivated, creative, greatly experienced and skilled with superior attention to detail and proficient communication skills to handle all the stakeholder intercommunications needs.

I have been working in many different industries, companies and businesses adapting myself, acquiring new knowledge during the time and always, very soon, disrupting the place and methodologies to push it further with my analytical, creative and fresh point of view.

The IT industry has been my natural environment for many years and that has given me the experience and ability to create, improve and learn always the cutting edge technologies using the most modern methodologies, tools and skills.

I am the kind of worker that always achieve results, aware about the deadlines, in the best way possible whenever it is within a team, leading it or by myself. Obsessed with perfection, scalability and usability of the final product and project I am involved, giving the final user the best service possible.

education...

what have I (officially) studied?

These are the certifications, degrees and titles I hold. Obviously these are not the only ones I have, but they are the ones that are, somehow, officially accredited.

- 2015  **Developer Programmer Superior Diploma**
ANZSCO Code 261312
- 2015  **Data Scientist, Data Analysis with R**
Self motivation, Coursera (John Hopkins University)
- 2012  **UI/UX and FrontEnd Development**
Indra Software Labs
- 2011  **Android Mobile Development Master Course**
Self motivation, Master D online learning
- 2010  **Java and J2EE**
Self motivation, Triparty Foundation
- 2009  **MVC with ASP.net**
GAE Informática, S.A.
- 2008  **Ms SQL Server Administration and Tunning**
GAE Informática, S.A.
- 2007  **Payroll and payslip calculation**
Self motivation, Triparty Foundation
- 2006  **Linux System Administration**
Self motivation, Linux ORG
- 2005  **3D Design and Development with 3d Studio Max**
Self motivation, Professional Training and Skills Don Benito
- 2004  **Bintec Routing Configuration and Administration**
SET ici, S.L.
- 2003  **SELT@ PBX/IPX VoIP / Asterisc Config and Admin**
SET ici, S.L.
- 2002  **Superior Professional Degree on IT Systems Administration**
IES Suárez de Figueroa (Zafra, Badajoz, Spain)

skills...

what about my skills?

It's hard to explain and list everything that I've learned and used on my career. There are so many skills, so many different programming languages, methodologies, techniques, platforms, frameworks, services... here are some easy to visualize diagrams to resume them:

tools, methods,
techniques...

strengths

experience...

me on server
along timeRoad Map
specific new features
general enhancementsvery stable version
highest performance
multitasking prod. focused

current

team and agile oriented
ultimate self guidance
Javascript mastering
data representation madness

v6.0

robustness improvements
lots of bug fixing
resilience to stress and
unnecessary meetings

v5.5

massive improvements
on reliability and multipurpose
use of the platform

v5.0

platform compatibility
new features on backend
revamped frontend

v4.0

more...

what have I done (so far...)?

My experience is vast and diverse. I've worked for many different industries such food factories implementing automatic health tracking systems, desktop applications for accounting, taxation and payroll systems, mobile applications, IoT applications, web apps for CRM and/or solar panel performance monitoring, web design for different companies, UI/UX and Agile advisory and implementation, frontend and backend development, change advisory, technical leadership, product owner, mentoring, large and complex data analysis representation, education systems...

Senior FullStack Developer for DHI Group / SeaPortOPX

Jan 2019 - current - (full-time)

As a Senior FullStack Developer I very often jump from different layers of the tech stack to help out when deliveries are too tight for other members of the team, learning on the way a bit of engineering madness, heaps of calculation with MathLab and its application into C# microservices. In a couple of months, when I was finally given the opportunity to unleash my full potential on frontend development, I redesigned and implemented a new and incredibly robust technology stack on React to set the foundations for the new generation of SeaPort core business model. Mentoring junior devs and implementing Agile.

Senior FullStack Developer for MOVUS

Jul 2018 - Dec 2018 - (full-time)

Hired as Senior Fullstack Developer but mostly working within the web and mobile team developing mobile applications for supporting the business model and IoT devices onboarding, creating dashboards, ensuring high quality and reliability products, working towards very short deadlines and sprints. Lots of dev QA, unit testing coverage, automation testing experimentation... mainly using ReactJs and React Native technologies with a bit of BI reporting with PowerBI and other integrations.

Analyst/Developer for CQUniversity

dec 2017 - Jun 2018 - (full-time)

Hired as experienced Analyst/Developer, my tasks have been so far very diverse from programing and coding to implementation, deployment, dev QA, technical leader, change management and advisory, turning myself in some kind of senior mentor for young workforce and, sometimes, acting as product owner or internal consultant.

Fullstack developer for Brown Paper Bag

jun 2016 - nov 2017 - (full-time)

As a fullstack developer, my tasks were analysing, designing and developing from the ground up an education project for schools about Sustainability and Renewable Energies. Most of the front-end was developed by myself and some parts on the back-end. We used Laravel php, C#, Angular 2+, AWS, lambda and serverless, data analysis...

experience...

previous experience...

better performance
enhanced project management
new team-focused features

v3.5

Fullstack developer for APN/ARN

mar 2016 - jun 2016 - (full-time)

For the brief few months I worked for APN, I had the opportunity of mostly leading front-end development mentoring a junior front-end developer. I worked also as back-end developer using python when required and briefly as a mobile developer. Unfortunately, the project was closed and APN was bought by NewsCorp.

higher quality control
bumped version management
massive platform reengineering

v3.0

Software and web developer for Focus Products

Feb 2013 - mar 2016 - (full-time)

Leading several modules within the huge CRM/ERP system, I analysed and developed parts as virtual printers, water analysers, reporting and statistics systems, on field scheduling service systems, others tasks performed included data analysing, data migration, remote assistance and end user support. Mainly working with python, knowckout and Google Cloud Platform services.

multitasking without team
resource management
new reliability implemented

v2.5b

Head Developer for Smooth Symmetry

oct 2012 - feb 2013 - (part-time / freelancing)

Working as a freelancer, most of my jobs were for Smooth Symmetry. I was responsible for design, develop, deployment and maintenance for several web sites, SEO strategies and hosting configuration.

new project compatibility
enhanced multitasking system
mentoring and advice features

v2.5

Senior Software Developer for Indra Software Labs

aug 2011 - sep 2012 - (full-time)

At the beginning I was a Senior Developer, but soon I was moved to the UX/UI core team for the whole factory (400+ employees), in a couple of months I was promoted to help, advice and bring support for architecture design and development for different projects across the company.

fast response implemented
new platform developed
software focused enhanced
first massive fork

v2.0

Senior Software Developer / Analyst for GAE Informática

may 2006 - aug 2011 - (full-time)

Leading the analysis and development of software design for professional services as accounting, taxation, Social Security and payroll/payslips calculation. I also developed many internal systems for version control, package and deployment, support tracking systems by tickets and the implementation of new methodologies within the company.

stable version released
faster delivery system
new multitasking features

v1.0

Technician and Junior Software Developer for SET ici

feb 2003 - may 2006 - (full-time)

customer focused version
hardware cursing mitigation
networking and sysadmin

v0.1

Hardware, technician, sysadmin for PuntoNET Informatica

jun 2002 - feb 2003 - (full-time)

origin
