

cover letter

Dear team at Virid,

I'm taking the opportunity to contact you in regards to the vacant position you have advertised on [seek.com.au](https://www.seek.com.au) about Head of Engineering / Team Leader.

I saw the position and I couldn't hide the excitement I felt. I found myself as a great fit for the requirements listed in it, from the skills to the experience and, definitely, the attitude and motivation.

I have been involved mentoring teams, driving projects and even acting as a key player when architecting and making decisions for the future or enormous projects such the current one I'm working on in DHI / Seaport.

I am not new to all the different aspects of companies from the stakeholders to the team leadership requirements, mentoring and driving projects from zero to delivery in both situations: within start-ups and within enterprise-like bigger companies.

I attached my curriculum on my application so you can see on it how there is a lot I can bring for your company. I've been part of the Change Advisory Board in CQUniversity, front end leader, key architect and involved in every part of the technology stack.

I've worked before in projects using cutting edge technologies within start-up-like companies and more enterprise-oriented ones also.

I've taken the role of product owner and project/team leader before with great success mentoring junior developers and integrating Agile methodologies. Those are roles I feel comfortable performing and I'm not scare of challenges nor hard work.

I strongly believe that, thanks to my experience and skills, I am the right choice to help you in your next endeavours.

Hoping to get to talk to you soon.

Best regards,

Marcos Morales Rodrigo
