me on semver
along time

Road Map
specific new features
general enhancements

very stable version
highest performance
multitasking prod. focused

current

re-learning much of the stack
applying new tools
architecting solutions

v7.0

applying new tools
pushing forth old systems
renovated energy

v6.5

multitasking
leading a sparse team
.NET refresh and consulting

v6.1

team and agile oriented
ultimate self guidance
javascript mastering
data representation madness

v6.0

robustness improvements
lots of bug fixing
resilence to stress and
unnecesary meetings

v5.5

massive improvements
on reliability and multipurpose
use of the platform

v5.0

more...

what have I done (so far...)?

My experience is vast and diverse. I've worked for many different industries such food factories implementing automatic health tracking systems, desktop applications, mobile applications, complex IoT solutions, web apps for CRM and/or solar panel performance monitoring, web design for different companies, UI/UX and Agile advisory and implementation, frontend, mobile, backend and architecture development, change advisory, technical leadership, product owner, mentoring, large and complex data analysis representation...

Senior FullStack Developer / Solutions Architect for HSC
Mar 2022 - current - (full-time)

I was hired for HSC Technology Group as front-end developer, however, due to the lack of staff, I soon had to jump into the role of a solutions architect in AWS, applying serverless approach, containerization, API publishing, health data management and large and very complex IoT systems from the hardware and firmware to the data structures and its visualization.

FullStack Developer for Focus Products
Jun 2020 - Mar 2022 - (full-time)

Back in the project, implementing new methodologies applied to the old system already in place. Working heavily with python, Google services and tools, Google Cloud Platform, Vue3, Vite, Firebase... etc

Lead FullStack Developer for Zeal Systems
Jan 2020- Jun 2020 - (full-time)

Senior FullStack Developer for DHI Group / SeaPortOPX
Jan 2019 - Dec 2019 - (full-time)

As a Senior FullStack Developer jumping very often from different layers of the tech stack to help out when deliveries were too tight for the team, learning on the way a bit of engineering madness with MathLab and its application into C# microservices. In a couple of months, when I was finally given the opportunity to unleash my full potential on frontend development to redesign and implement the new foundations on React for the new generation of SeaPort core business model. Mentoring junior devs and implementing Agile.

Senior FullStack Developer for MOVUS
Jul 2018 - Dec 2018 - (full-time)

Hired as Senior Fullstack Developer but mostly working within the web and mobile team developing mobile applications for supporting the business model and IoT devices onboarding, creating dashboards, ensuring high quality and reliability products, working towards very short deadlines and sprints. Lots of dev QA, unit testing coverage, automation testing experimentation... mainly using ReactJs and React Native technologies with a bit of BI reporting with PowerBI and other integrations.

Analyst/Developer for CQUniversity
dec 2017 - Jun 2018 - (full-time)

Hired as experienced Analyst/Developer, my tasks have been so far very diverse from programing and coding to implementation, deployment, dev QA, technical leader, change management and advisory, turning myself in some kind of senior mentor for young workforce and, sometimes, acting as product owner or internal consultant.
